DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species:

Under the Genus BLDC motor the Species correspond to the following figures of the disclosure:

- I. Figures 1-3 ; common for both species
- II. Figures 4-7 ; spring systems for rotor supported at both side ends
- III. Figures 8-11 ; spring systems for rotor supported at single side end

The species are independent or distinct because the inventions are directed to related products. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j).

In the instant case, the inventions as claimed have structurally different design as indicated in the figures grouped above. The motor structure and distribution of tension acting on rotor and shaft are clearly different between a rotor supported at both ends and a rotor supported at one side of ends. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species under each Genus for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 1 or 13 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John K. Kim whose telephone number is (571) 270-5072. The examiner can normally be reached on M-F 8-5.
